EDUCATION

Indian Institute of Technology Guwahati (IITG)

2023 – 2027

BSc (Hons) in Computer Science

- **Relevant Coursework:** Data Structures, Operating Systems, DBMS, Computer Networks, Object-Oriented Programming, Machine Learning, Artificial Intelligence, Java Programming, Python Programming

PROJECTS

JobLens – AI-Powered Job Application Optimizer | *MERN, Gemini API, MongoDB, JWT*

- **Live:** joblens-liard.vercel.app | **Code:** github.com/NitinKushwahcodes/joblens
- Engineered an end-to-end job application platform enabling resume parsing and job description analysis with a deterministic scoring system (0–100), improving application targeting efficiency.
- Designed a 4-factor rule-based matching algorithm (skills, experience, education, keyword overlap) ensuring explainable and accurate scoring over black-box AI approaches.
- Integrated Gemini 2.0 Flash API with fallback architecture (Groq LLaMA) to generate tailored cover letters, recruiter emails, referral messages, and interview insights in real time.
- Built secure backend using JWT (httpOnly cookies), bcrypt hashing, rate limiting, and Helmet, ensuring production-grade authentication and API security.
- Developed resume parsing pipeline using pdf-parse and structured LLM prompts, extracting projects, skills, and experience into normalized JSON schema.
- Implemented job tracking system with application states, interview round logging, and notes, improving workflow visibility across multiple job applications.

TaskFlow – Full Stack Task Management System | *Node.js, Express, MongoDB, Vanilla JS*

- **Live:** taskflowxt.netlify.app | **Code:** github.com/NitinKushwahcodes/TaskFlowX
- Architected a production-deployed full-stack task management app supporting 3 user roles with JWT authentication and role-based access control, eliminating unauthorized access across all endpoints.
- Designed 15+ RESTful API endpoints with filtering, pagination, and priority-based sorting, capable of handling 1,000+ concurrent task records efficiently.
- Hardened application security using Helmet, bcrypt, CORS, and rate limiting — reducing attack surface against brute-force and injection threats.
- Built MVC-pattern backend with custom middleware pipeline and centralized async error handler, reducing error-handling boilerplate by ~60%.
- Deployed live on Render/Railway with environment-separated configs for dev/prod, achieving zero downtime across API and frontend.

IndiaQuant MCP – AI Stock Market Intelligence Backend | *Node.js, Express, SQLite*

- **Code:** github.com/NitinKushwahcodes/indiaquant-mcp
- Constructed a real-time stock intelligence backend integrating 3+ financial and news APIs (NSE/BSE data feeds), delivering live market data with sub-second response times.
- Implemented RSI-based quantitative trading signal engine combined with NLP sentiment analysis on financial news, generating actionable buy/sell signals across 50+ tracked stocks.
- Designed virtual portfolio system with SQLite supporting real-time PnL tracking, trade history, and position management for simulated paper trading across multiple portfolios.
- Delivered options analytics module computing full Black-Scholes Greeks (Delta, Gamma, Theta, Vega) for live options chains — a feature typically found in paid quant platforms.
- Developed sector heatmap engine and oversold stock scanner processing 500+ data points per refresh cycle, surfacing high-signal opportunities in under 300ms.

ACHIEVEMENTS & CODING PROFILES

Solved **500+ DSA** and Competitive Programming problems, significantly improving problem-solving and algorithmic thinking. Building consistent coding proficiency with ratings: **Codeforces (1208)**, **CodeChef (1495)**, and **LeetCode (1580)**. Regularly participate in coding contests and hackathons to test and enhance real-world problem-solving skills under pressure. Earned multiple certifications in development and core computer science domains alongside continuous DSA practice.
